**WRH Industries Showcases “Virtually Indestructible” Airline Luggage Bin
At the 2013 Paris Air Show**

Fall River, MA USA – June 17, 2013 – WRH Industries, Ltd., a world leader in the design and manufacture of rugged plastic containers, will be exhibiting at the 50th International Paris Air Show from June 17 – 23, 2013, at Le Bourget Exhibition Centre. Among its many products, WRH will be showcasing their virtually-indestructible, TSA-approved baggage check and claim handling bins. The nesting bins, which are X-ray and RF-invisible, are designed for severe-duty operations that include high-speed, belt-driven baggage-handling operations; picking; and extreme temperature resistance. The luggage bins have handling features that include recessed, impact-resistant hand-holds; reinforced perimeters and shock-proof wall handles; slide/grip bottom rails; and step-down side-walls for oversized bag retention. The bins, backed by an unprecedented five-year breakage warranty, are available in two sizes and can be custom-designed to accommodate any system.

“We design and manufacture things that just don’t break!” said Warren R. Hartwell, president of WRH Industries. “Our luggage bins are made in America from our exclusive Teflon®/PP formulation, have an ultimate high-impact, easy-to-clean surface, and are guaranteed to withstand 180F sanitizing rinse or even steam and autoclave sanitation.” He continued, “Our products contain no fiberglass filaments. Our custom-formulated, extremely wear-resistant and self-lubricating material is guaranteed not to crack, chip or delaminate - even on the corners. We can also custom-design the bins with options such as solid or vented bottoms with tapered vents, custom or standard colors for product identification, and stacking features using stainless steel flip-down bails.”

WRH’s luggage bins are currently in use by major carriers such as American Airlines and Delta Airlines in airports that include LaGuardia Airport, San Francisco International Airport, Miami International Airport, Hartsfield-Jackson Atlanta International Airport, Washington Dulles International Airport, Fort Lauderdale-Hollywood International Airport, Jacksonville International Airport, and the Luis Muñoz Marín International Airport serving San Juan, Puerto Rico. The bins operate on luggage handling systems made by Siemens, FMC, Webb, Glidepath, G&S and more.

At the Paris Air Show, WRH will also be displaying their airline catering, commissary and foodservice bins and trays that are manufactured with NSF/CE/FDA/USDA-compliant materials and are safe and internationally accepted for direct food contact. Additionally, WRH is a leader in custom-designed products for specific applications.

WRH Industries, Ltd. is celebrating more than 50 years serving the specialized needs of today's domestic and international companies. By designing, engineering and manufacturing high-performance, durable, and recyclable plastic handling containers, WRH has firmly established itself as a leader supplying the manufacturing, processing, confectionery, foodservice and pharmaceutical industries. WRH is dedicated to developing material-handling solutions, implementing reusable programs, and, of course, creating high-performance standard and custom-molded products.
